

X12 EDI Reference Snippet (test fixture)

997 Functional Acknowledgment

The 997 Functional Acknowledgment transaction set is used to acknowledge the receipt and syntactical correctness (or errors) of a previously transmitted X12 interchange. It confirms whether the sender's functional group was accepted, accepted with errors, or rejected.

Trading partners typically require a 997 in response to any functional group they send, closing the loop on delivery confirmation within the EDI exchange.
